

HTML Embed

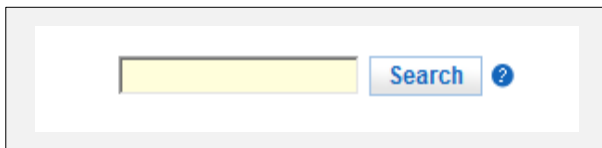

Capture Screens – Overview

HTML Embed will enable the user to add existing HTML content to the CMA. This content will be snippets of HTML in a file. The content could include Html, JavaScript and style (CSS).

Please see the examples below and the 'Getting Started with Navigator Online and Content Management' document to see the placement of the HTML Embed on the screen.

This is an example of Embedded HTML from the Marketing Home page:

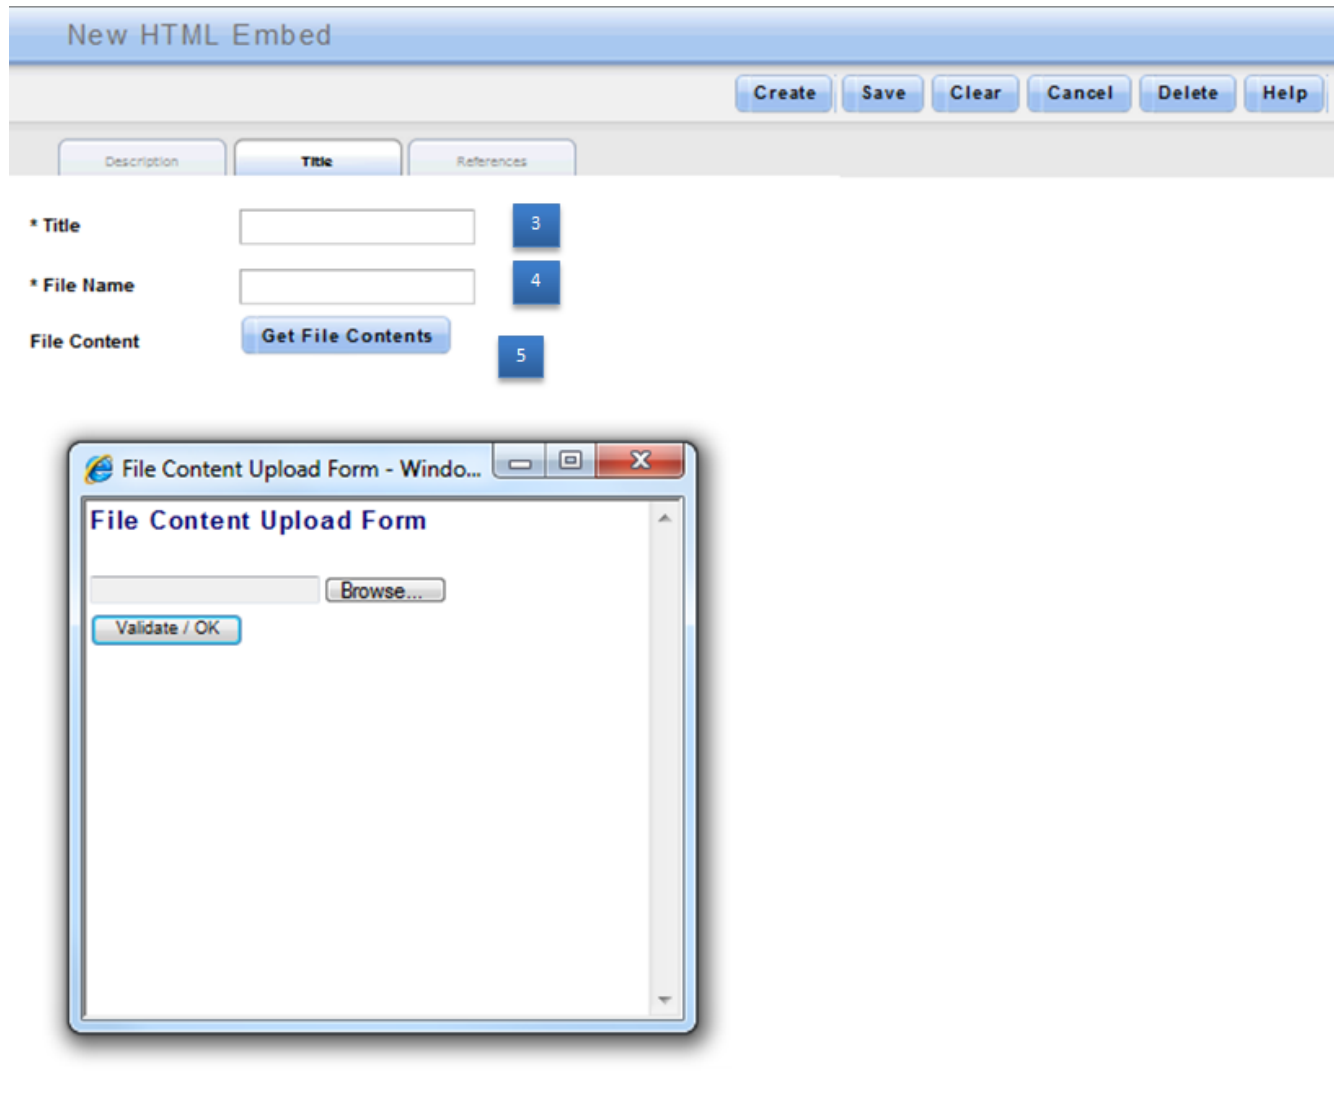

HTML Embed

Description Tab

The screenshot shows a dialog box titled "New HTML Embed". At the top, there is a blue header bar with the title. Below the header is a row of six buttons: "Create", "Save", "Clear", "Cancel", "Delete", and "Help". Underneath the buttons is a tabbed interface with three tabs: "Description" (which is selected and highlighted in blue), "Title", and "References". The "Description" tab contains two fields: a required field labeled "* Description" with an empty text input box, and another required field labeled "* LOB" with a dropdown menu currently showing "Home Page".

Title Tab
